Algeria

Professional Summary

AI Engineer holding a Master's degree in Intelligent Computer Systems, specializing in Artificial Intelligence, Natural Language Processing (NLP), Deep Learning, and Large Language Models (LLMs). Experienced in transformer fine-tuning, semantic analysis, and end-to-end AI application development using PyTorch, TensorFlow, Hugging Face, and FastAPI.

Education

Master's Degree in Intelligent Computer Systems 2023 – 2025

University of Mouloud Mammeri, Tizi Ouzou, Algeria

Master Thesis: Automatic Detection of Fake News Through Semantic Analysis of Social Media Texts

Bachelor's Degree in Computer Science 2020 – 2023

University of Mouloud Mammeri, Tizi Ouzou, Algeria

Technical Skills

Programming Languages: Python, SQL, JavaScript, PHP

Machine Learning & Deep Learning: PyTorch, TensorFlow, Keras, Scikit-Learn

NLP & LLMs: BERT, GPT-2, LLaMA, Hugging Face Transformers, LoRA, QLoRA

Data Science: Pandas, NumPy, Matplotlib, Seaborn

Computer Vision: OpenCV, CNNs

Backend & APIs: FastAPI, Flask

Databases: MySQL, PostgreSQL

Tools: Git, GitHub, Agile Methodologies

Design: Figma, Adobe Photoshop, Adobe Illustrator, Canva

Projects

TruthScope — AI-Powered Fake News Detection Platform GitHub

Python • PyTorch • BERT • LoRA • QLoRA • Hugging Face • FastAPI

- Fine-tuned a BERT model using LoRA and QLoRA techniques on a dataset of more than 185,000 news articles and social media posts.
- Integrated and harmonized datasets from TruthSeeker 2023, FakeNewsNet, and public fact-checking sources.
- Built a complete misinformation detection pipeline including preprocessing, inference optimization, and deployment.
- Developed a FastAPI backend connected to an interactive web interface.

Programming Question Answering System

Python • LLaMA • GPT-2 • Hugging Face

- Developed a domain-specific question answering system focused on programming-related queries.
- Fine-tuned LLaMA and GPT-2 models using parameter-efficient training approaches.
- Built NLP pipelines for information retrieval and answer generation.

Breast Cancer Detection Using Deep Learning

Python • TensorFlow • Keras • Computer Vision

- Designed and trained a Convolutional Neural Network (CNN) for medical image classification.
- Implemented preprocessing, data augmentation, training, and evaluation workflows.

Freelance Project — Vehicle Rental Platform

React 19 • TypeScript • Vite • Tailwind CSS

- Developed a vehicle rental web platform for a freelance client.
- Designed the user interface and integrated the application with backend services and databases.
- Implemented booking and vehicle management functionalities.

Freelance Project — Branding & Packaging Design for a Beverage Company

Branding • Adobe Illustrator • Adobe Photoshop

- Designed the complete visual identity of a beverage brand.
- Created logo concepts, product labels, and marketing materials.
- Developed a consistent brand image aligned with the company's positioning strategy.

Additional Projects

Smart Home Activity Recognition System (Deep Learning) • MyTicket (PHP, MySQL)

Additional Information

Languages: Arabic (Native) • Tamazight (Native) • French (C1) • English (C1)
